5

- 1. A composition comprising an isolated collection of mutant nematodes altered to reduce or increase sensitivity to desiccation stress.
- 2. The composition of Claim 1, wherein said mutant nematodes comprise a knock-out osmotic stress resistant (OSR-1) mutation.
 - 3. The composition of Claim 1, wherein said collection of mutant nematodes is configured for administration to a host.
- 15 4. The composition of Claim 3, wherein said host comprises a plant.
 - 5. The composition of Claim 3, wherein said host comprises an animal.
- 6. A method for treating a host organism, comprising the steps of exposing said host to a collection of isolated mutant nematodes altered in sensitivity to desiccation stress as compared to non-mutant nematodes.
 - 7. The method of Claim 6, wherein said host is a plant.
- 25 8. The method of Claim 6, wherein said host is an animal.
 - 9. The method of Claim 6, wherein said mutant nematodes are altered to reduce sensitivity to desiccation stress.
- 30 10. The method of Claim 9, wherein said nematodes comprise Steinermatidea or Heterorahbtidea nematodes.

- 11. The method of Claim 6, wherein said mutant nematodes are altered to increase sensitivity to desiccation stress.
- 5 12. A composition comprising;

10

- a) a composition comprising small interfering RNA duplex, or vectors encoding said small interfering RNA duplex, configured to inhibit expression of OSR-1 protein, and
 - b) a nucleic acid transfecting agent.
